

PLUMBING WITH A PLUS
EVERLOC+™ compression-sleeve fitting system

EVERLOC+

Next-generation reliability, safety and savings.

It's here. REHAU's ingenious EVERLOC+ compression-sleeve fitting system is now available for commercial and multi-family plumbing projects in pipe sizes up to 2 inch. Enjoy the advantages of crosslinked polyethylene (PEXa) piping – safety, reliability and cost savings – AND hit the mark on all stringent standards and certifications.

The REHAU PEXa plumbing system starts with RAUPEX® pipe, the trusted choice by plumbers and contractors around the globe for more than 40 years. Add in a full complement of our compression-sleeve fittings featuring four sealing edges and our textured compression sleeves for unrivaled security. Now fire up one of our compression-sleeve tools that cold-expands the pipe to insert the fitting and then locks the compression sleeve over both.

Expand, Compress, Done! Precise, secure connections made immediately, EVERY time in ANY weather, are instantly ready for pressure testing.

EVERLOC+

Meet demanding specs, tight deadlines and budget targets with confidence.

For nearly a century, copper piping has been the plumbing mainstay for commercial construction. Now commercial and multi-family developers are discovering what residential contractors have known for years: PEXa is easier to install and more durable than copper. So, let's get right to the point. Here's why combining RAUPEX pipe and the EVERLOC+ compression-sleeve fitting system will meet or exceed copper standards on three critical measures: reliability, safety and savings.

KEY BENEFITS

RELIABILITY

Freeze-break resistance:
Flexibility allows pipe to expand and return to original diameter.

4x more secure: Four sealing edges, compression-sleeve technique and textured sleeve.

0% build up and therefore 0% diminished flow characteristic over time.

SAFETY

NSF certified for drinking water quality.

No need of chemicals, glues, solder or torches that are harmful to the environment and workers.

SAVINGS

Up to **65% faster to install** compared to copper plumbing system.

Flexible pipe requires fewer fittings than rigid piping, reducing installation time and cost.

0 waiting time for pressure testing.

AN UNBEATABLE TEAM

Backed by REHAU quality and support.

Quality

EVERLOC+ compression-sleeve fittings and PEXa plumbing pipe are manufactured exclusively by REHAU and backed by a 25-year limited warranty.

REHAU EDGESM

Our mechanical and plumbing systems are offered by a growing network of contractors who participate in our REHAU EDGE contractor development program. Using training, incentives and events, this program keeps the entire supply chain up-to-date and engaged in delivering the best possible service to your jobsite.

Find out more at na.rehau.com/edge

REHAU Academy

From hands-on technical training, lunch and learns, to jobsite support, both our practical and online training programs equip you with skills and knowledge to professionally specify, design and install our systems. First-class presenters convey REHAU system expertise and relevant industry experience, giving specifiers, customers and partners a competitive edge.

RAUPLEX UV shield pipe

RAUPLEX PEXa pipe with UV shield protection is the smart alternative to copper and other polymers. RAUPLEX offers proven durability while saving money on both materials and installation. It also means added flexibility and precision during project planning while maintaining excellent long-term flow performance and water quality.

Compression-sleeve fittings

The patent-pending design of EVERLOC+ compression-sleeve fittings features the latest in polymer technology, including four sealing edges designed to deliver leak-free reliability. When locked with our textured PEXa sleeve, EVERLOC+ connections are immediately ready for pressure testing and warranty-backed for decades of reliable service.

Compression-sleeve tools

The EVERLOC+ XL power tool features quick-change expander heads and color-coded compression jaws sized for up to 2 in. pipe. The tool easily overcomes installation challenges with a 360° rotating tool housing and multi-position compression jaws. Save more time on commercial projects by using both the XL power tool and the XL expander tool.
